SHUBHI PANDEY

B.Sc. Statistics (Major) | Computer Science & Mathematics (Minor)
pandeyshubhi725@gmail.com | github.com/Shubhi-1001

OBJECTIVE

Detail-oriented Statistics graduate with a strong analytical foundation and hands-on experience in data cleaning, exploratory analysis, and business-focused reporting, seeking an entry-level Data Analyst / Business Analyst role to translate raw data into actionable insights.

SKILLS

- Data Analysis: Data cleaning, exploratory data analysis, statistical analysis, outlier detection, hypothesis testing
- Programming & Querying: R, Python, SQL
- Tools: Excel, Jupyter Notebook, Google Colab, Database Management Systems, Git/GitHub
- Business & Reporting: Insight generation, opportunity scoring, data-driven recommendations, technical writing
- AI & Automation: AI-assisted analysis and debugging, prompt design, workflow automation (n8n)
- Professional: Leadership, Time Management, Community Engagement

EXPERIENCE

Summer Intern, Indian Association for Productivity, Quality and Reliability (IAPQR) *May – Jun 2025*

- Analyzed secondary national income data to identify trends, using statistical analysis techniques to summarize findings for review.

PROJECTS

Swiggy Restaurants Analysis — Independent Project

R | Data Cleaning, Exploratory Data Analysis, Business Recommendations | GitHub

- Cleaned and structured a 148,541-row restaurant delivery dataset in R, resolving structural missingness in ratings (affecting 58% of rows), converting bucketed rating-count labels to numeric estimates, filtering cost outliers via percentile thresholds, and parsing combined city/locality fields.
- Conducted exploratory analysis across city, cuisine, cost, and rating distributions to surface patterns in market concentration and pricing.
- Built an opportunity-scoring model to identify under-served city–cuisine combinations, correcting an initial small-sample bias by raising the minimum sample threshold and segmenting established metro markets from emerging ones.
- Found cost was a weak predictor of rating (correlation 0.136), and presented ranked, data-driven market expansion recommendations to a business audience.
- Used AI (Claude) as a debugging and review partner, including to catch a flaw in the first scoring approach; all analytical decisions and recommendations are my own.

Job Search Workflow — Personal Project

n8n | Apify | Google Sheets | LLM API

- Built an automated workflow that collects new job postings, filters them for fit with an LLM, generates a tailored resume draft for each match, and logs every application in Google Sheets.
- Added a lead-tracking sheet that drafts personalized messages, schedules follow-ups after 6 days, and emails a weekly activity summary; every message is reviewed and sent manually.

EDUCATION

Bachelor of Science, Major in Statistics *2023 – 2026*
Calcutta University | CGPA: 7.225

Class 12 (ISC) *2023*
Adamas International School | 94.5%

Class 10 (ICSE) *2021*
Adamas International School | 95.4%

RELEVANT COURSEWORK

Linear Algebra, Probability Theory, Multivariate Statistical Modelling, Calculus

LANGUAGES

English, Hindi, Bengali
